Chapter 1

Modules Index

1.1 Modules List

Here is a list of all modules with brief descriptions:

build_hamiltonian (This module contains all subroutines necessary to build the Hamiltonian matrix)	7
constant (Defines all physical constants needed for CCE2)	9
read (Reads all input files)	10
system_basis (Defines the vector basis for the spin system considered)	11
type (Defines all variable, array etc. types needed for CCE2)	12

Chapter 2

Data Type Index

2.1 Data Types List

Here are the data types with brief descriptions:

type::basis_def	13
---------------------------------	----

Chapter 3

File Index

3.1 File List

Here is a list of all files with brief descriptions:

include/ constant.f90	15
include/ read.f90	16
include/ type.f90	17
library/ build_hamiltonian.f90	18
library/ system_basis.f90	19
src/ CCE2.f90	20

Chapter 4

Module Documentation

4.1 `build_hamiltonian` Module Reference

This module contains all subroutines necessary to build the Hamiltonian matrix.

Functions/Subroutines

- subroutine [build_diag](#)
Computes the diagonal part of the free Hamiltonian.

4.1.1 Detailed Description

This module contains all subroutines necessary to build the Hamiltonian matrix.

Author:

Dr. Roland Guichard University College London

4.1.2 Function/Subroutine Documentation

4.1.2.1 subroutine `build_hamiltonian::build_diag` ()

Computes the diagonal part of the free Hamiltonian.

Author:

Dr. Roland Guichard University College London Computes the Zeeman terms of the Hamiltonian.

Parameters:

\leftarrow *basis*
 \rightarrow --

Returns:

H0_diag

Here is the caller graph for this function:

4.2 constant Module Reference

Defines all physical constants needed for CCE2.

Variables

- double precision, parameter `pi` = 3.141592653589793d0
- double precision, parameter `gamma_e` = 1.7591d5
- double precision, parameter `gamma_n_29Si` = 53.1903d0

4.2.1 Detailed Description

Defines all physical constants needed for CCE2.

Author:

Dr. Roland Guichard University College London

4.2.2 Variable Documentation

4.2.2.1 double precision,parameter constant::`gamma_e` = 1.7591d5

4.2.2.2 double precision,parameter constant::`gamma_n_29Si` = 53.1903d0

4.2.2.3 double precision,parameter constant::`pi` = 3.141592653589793d0

4.3 read Module Reference

Reads all input files.

Functions/Subroutines

- subroutine [read_basis](#)
Reads input file basis.inp.

Variables

- character(len=*), parameter [fmt_str](#))
- character(len=*), parameter [fmt_dbl](#))

4.3.1 Detailed Description

Reads all input files.

Author:

Dr. Roland Guichard University College London

4.3.2 Function/Subroutine Documentation

4.3.2.1 subroutine read::read_basis ()

Reads input file basis.inp.

Author:

Dr. Roland Guichard University College London Sets all variables for the vector basis of the spin system.

Parameters:

← *basis.inp*
→ --

Returns:

basis

Here is the caller graph for this function:

4.3.3 Variable Documentation

4.3.3.1 character (len=*),parameter read::fmt_dbl)

4.3.3.2 character (len=*),parameter read::fmt_str)

4.4 system_basis Module Reference

Defines the vector basis for the spin system considered.

Functions/Subroutines

- subroutine [create_basis](#)
Creates the vector basis.

4.4.1 Detailed Description

Defines the vector basis for the spin system considered.

Author:

Dr. Roland Guichard University College London

4.4.2 Function/Subroutine Documentation

4.4.2.1 subroutine system_basis::create_basis ()

Creates the vector basis.

Author:

Dr. Roland Guichard University College London Flow method (rate of change of position) used by integrator. Compute $\frac{d\lambda}{dt}$, $\frac{d\phi}{dt}$, $\frac{dz}{dt}$

Parameters:

\leftarrow *basis*
 \rightarrow --

Returns:

H0_diag

Here is the caller graph for this function:

4.5 type Module Reference

Defines all variable, array etc. types needed for CCE2.

Data Types

- type [basis_def](#)

Variables

- integer [basis_nb](#)
- double precision, allocatable [H0_diag](#)
- type([basis_def](#)), dimension(2) [basis](#)

4.5.1 Detailed Description

Defines all variable, array etc. types needed for CCE2.

Author:

Dr. Roland Guichard University College London

4.5.2 Variable Documentation

4.5.2.1 type ([basis_def](#)),dimension(2) type::[basis](#)

4.5.2.2 integer type::[basis_nb](#)

4.5.2.3 double precision,allocatable type::[H0_diag](#)

Chapter 5

Data Type Documentation

5.1 `type::basis_def` Type Reference

Public Attributes

- `character(len=20)` [spin_type](#)
- `integer` [spin_mt](#)
- `double precision` [spin_mag](#)
- `double precision, dimension(:), allocatable` [vector](#)

5.1.1 Member Data Documentation

5.1.1.1 `double precision type::basis_def::spin_mag`

5.1.1.2 `integer type::basis_def::spin_mt`

5.1.1.3 `character (len=20) type::basis_def::spin_type`

5.1.1.4 `double precision,dimension(:),allocatable type::basis_def::vector`

The documentation for this type was generated from the following file:

- `include/type.f90`

Chapter 6

File Documentation

6.1 include/constant.f90 File Reference

Modules

- module [constant](#)
Defines all physical constants needed for CCE2.

Variables

- double precision, parameter [constant::pi](#) = 3.141592653589793d0
- double precision, parameter [constant::gamma_e](#) = 1.7591d5
- double precision, parameter [constant::gamma_n_29Si](#) = 53.1903d0

6.2 include/read.f90 File Reference

Modules

- module [read](#)
Reads all input files.

Functions/Subroutines

- subroutine [read::read_basis](#)
Reads input file basis.inp.

Variables

- character(len=*), parameter [read::fmt_str](#))
- character(len=*), parameter [read::fmt_dbl](#))

6.3 include/type.f90 File Reference

Data Types

- type [type::basis_def](#)

Modules

- module [type](#)
Defines all variable, array etc. types needed for CCE2.

Variables

- integer [type::basis_nb](#)
- double precision, allocatable [type::H0_diag](#)
- type(basis_def), dimension(2) [type::basis](#)

6.4 library/build_hamiltonian.f90 File Reference

Modules

- module [build_hamiltonian](#)

This module contains all subroutines necessary to build the Hamiltonian matrix.

Functions/Subroutines

- subroutine [build_hamiltonian::build_diag](#)

Computes the diagonal part of the free Hamiltonian.

6.5 library/system_basis.f90 File Reference

Modules

- module [system_basis](#)
Defines the vector basis for the spin system considered.

Functions/Subroutines

- subroutine [system_basis::create_basis](#)
Creates the vector basis.

6.6 src/CCE2.f90 File Reference

Functions/Subroutines

- program [CCE2](#)

This part of the CCE2 code is the main.

6.6.1 Function Documentation

6.6.1.1 program CCE2 ()

This part of the CCE2 code is the main.

Author:

Dr. Roland Guichard University College London

Here is the call graph for this function:
